# Governance, Risk & Compliance

Turn regulatory complexity into competitive advantage. We guide organizations through NIST CSF, ISO 27001, SOC 2, PCI-DSS, HIPAA, GDPR, CMMC, FedRAMP, and beyond. From policy creation and risk analysis to audit preparation, we help you satisfy regulators while constructing a durable security foundation.

### SECURITY PROGRAM ASSESSMENTS

Evaluate your current processes, technologies, and team capabilities against recognized standards. We pinpoint gaps and deliver a prioritized action plan to raise your maturity level.

### PRIVACY & DATA PROTECTION

Map where personal data lives in your environment and identify weak points. We conduct privacy assessments and advise on safeguards that align with GDPR, CCPA, and other regional laws.

### AUDIT READINESS

Prepare for external examinations with mock audits, evidence organization, and remediation tracking. Walk into your next assessment confident that documentation is complete.

### PAYMENT CARD COMPLIANCE

Achieve and sustain PCI DSS alignment to protect card transactions. We walk you through scoping, gap remediation, and evidence gathering so audits go smoothly.

### FRAMEWORK IMPLEMENTATION

Deploy controls proportionate to your risk appetite using NIST, ISO, or sector-specific frameworks. We guide certification efforts and help maintain ongoing compliance.

### BEYOND THE CHECKBOX

Compliance is the starting line, not the finish. We help you build a resilient security culture that addresses real threats - turning regulatory obligations into lasting operational strength.

## WHY BARCODE SECURITY

Juggling overlapping mandates across industries and regions is daunting. Our consultants craft compliance programs that flex with your business - whether you operate locally or globally - so that security becomes a differentiator rather than a burden.

SIMPLIFY COMPLIANCE. **Let us guide your GRC journey.**
