Vulnerability Management

Go beyond one-time scans. We help you build a sustainable program that finds vulnerabilities, ranks them by real-world risk, coordinates fixes across teams, and tracks progress over time. The result is a continuous reduction in exposure that keeps pace with your evolving environment.

■ PROGRAM DESIGN

Tailored guidance to stand up or mature your vulnerability management function. We assess your current state, define processes, and recommend tooling that fits your scale and budget.

■ RISK-DRIVEN PRIORITIZATION

Move past raw CVSS scores. We factor in asset value, threat intelligence, and exploit availability to focus your patching efforts on the weaknesses that actually endanger the business.

■ SCANNING & VISIBILITY

Enhance detection coverage using your existing tools or deploy new scanners. We ensure nothing hides in the shadows - cloud workloads, containers, and legacy systems alike.

■ PATCH COORDINATION

Streamline remediation workflows that align security, IT operations, and application owners. Reduce the friction that lets critical patches languish for months.

■ DASHBOARDS & REPORTING

Unified views that show leadership where risk sits today and how trends move over time. Metrics that matter - mean time to remediate, SLA compliance, and coverage gaps.

■ CONTINUOUS IMPROVEMENT

Build processes that scale as your organization grows and threats shift. Regular program reviews keep your vulnerability management practice sharp year after year.

WHY BARCODE SECURITY

Growing organizations face mounting complexity - more assets, more changes, more threats. We partner with you to implement solutions that provide complete visibility and a repeatable method for driving down risk.

OWN YOUR RISK. **Build a vulnerability management program.**
